

Service Description – EAC (EURIECA® Awareness Course)

The EURIECA® Advanced First Aid program incorporates training, equipment and telemedicine, within an overarching clinical governance structure.

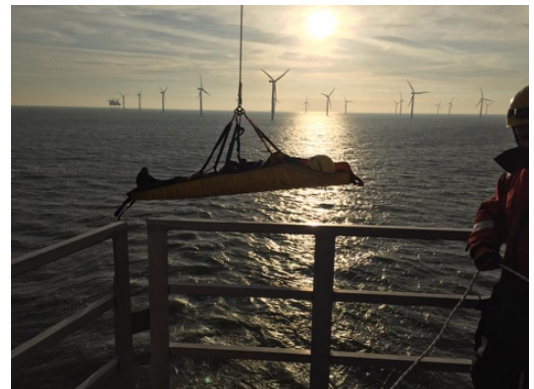

The EURIECA® Program is a key component of Emergency Response Planning in the majority of Offshore Wind Organizations around the world.

THE EURIECA® AWARENESS COURSE (EAC)

It is widely recognized that shore-based teams involved in site coordination & control are the lynchpin for communication, especially during an active emergency response, resulting in high pressure and testing of individuals' knowledge.

Considering this, the EAC is focused upon providing participants an improved understanding of the EURIECA® program, to enable effective operational planning and preparation, leading to a high performing team which improves outcomes when responding to any emergency situations that may occur.

In addition to improving their understanding of the operational constraints that working in the remote and austere environment brings, medical related terminology employed, and inter-agency working, individuals will also conduct emergency first aid skills, including management of bleeding, and basic life support using an Automated External Defibrillators (AED).

The EAC is a cross-certified HSE Emergency First Aid at Work qualification.

EURIECA

COURSE OVERVIEW

- Duration 1 day
- Maximum number of participants – 6
- Held on-site
- Certificate valid for 3 years

CURRICULUM OVERVIEW

- Catastrophic bleeding management
- Basic life support (CPR, choking, recovery position)
- Introduction to the EURIECA® algorithm, equipment & terminology
- Understanding telemedicine consultation process
- Scenario based training
- Tabletop exercises

INTENDED AUDIENCE

- Marine controllers/coordinators
- Logistic/store team members
- Staff not requiring GWO Basic first aid training

Please contact us should you require further information about the EAC.
